

To describe the multi-scale structure and associated cell biological processes **through** comprehensive modeling of **a cell** that can be disseminated and easily used by others for discovery. **The deliverable will be a 3DV cell of a particular type or a limited number of types. Approach should be able to be used to answer specific important biological questions but also make it possible to understand where our data, tools and approaches are still limited.**

Codify what we know and do not know about cells

Extensible to any cell type

Its not just about tools – its about available data
